

FOODND Final Project Feedback

Time Spent on Final Project: ~50-60 Hours

Lessons Learned:

- We became more familiar with the Jade templating engine and the materializecss framework.
- We also learned about front-end development and responsive web applications.
- We learned quite a bit about developing REST-ful APIs,
- Interfacing with said REST-ful API via javascript on the front end.
- We became a lot more familiar with Node.js
 - it's a very powerful and robust back end; it readily increased our throughput of requests.
- We also got comfortable securing our website with SSL.
- We really developed our synergy.
- We learned about each other.
- We learned that the best way of communicating is through Facebook chat, that's how we got things done.

This was a fun project, thanks for a great semester!
