Guide:

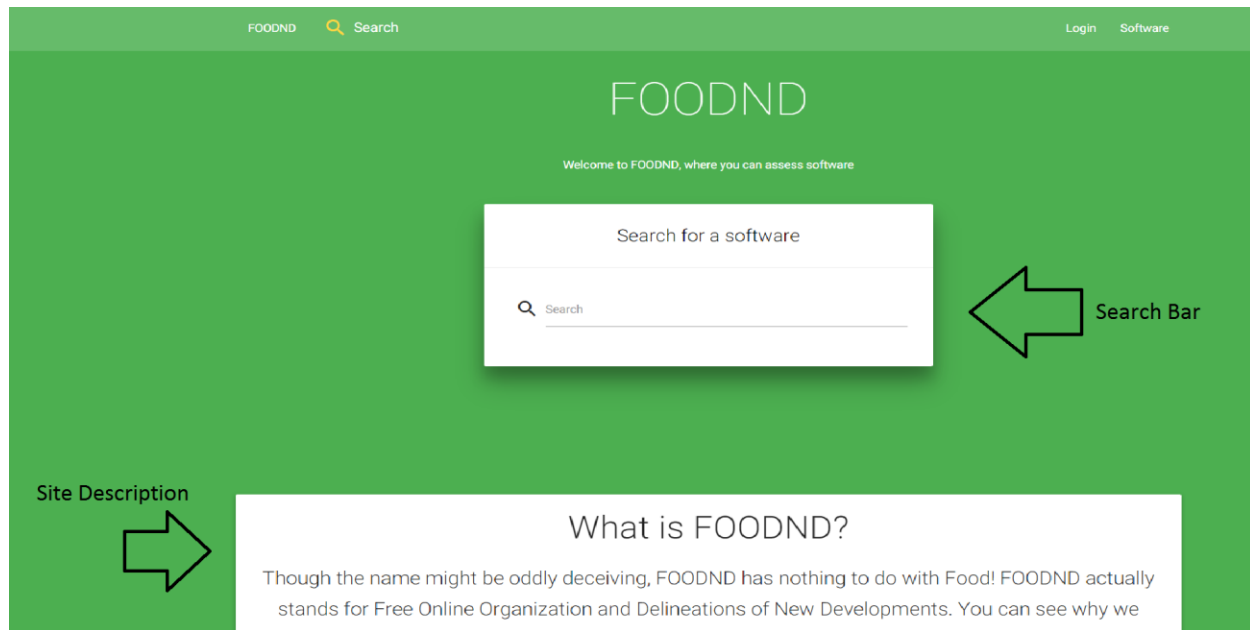

MENU BAR:

The menu bar is available to use on every page of FOODND. Clicking the FOODND icon will take you to the LANDING page of the website. The Search bar next to it allows you to search for a specific software on the website's database and go directly to that software's page. The SOFTWARE button will take you to the software page, as the LOGIN button will take you to the LOGIN page. After logging in on the LOGIN page, the icon will change to the USER dropdown menu that allows you to access your HOME page and the ability to LOGOUT.

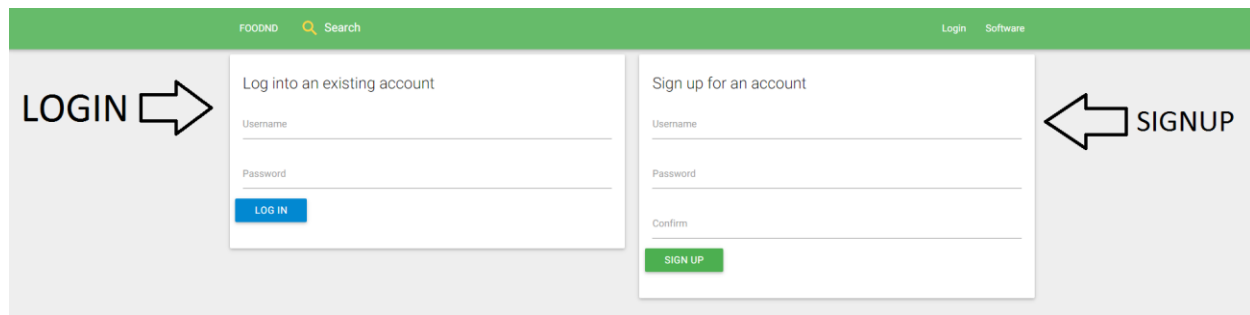

LANDING:

When you first access foodnd.com, you will be taken to the landing page. There are two unique features on this page. There is a search bar identical in functionality to the menu's search bar and a description of what the website is all about.

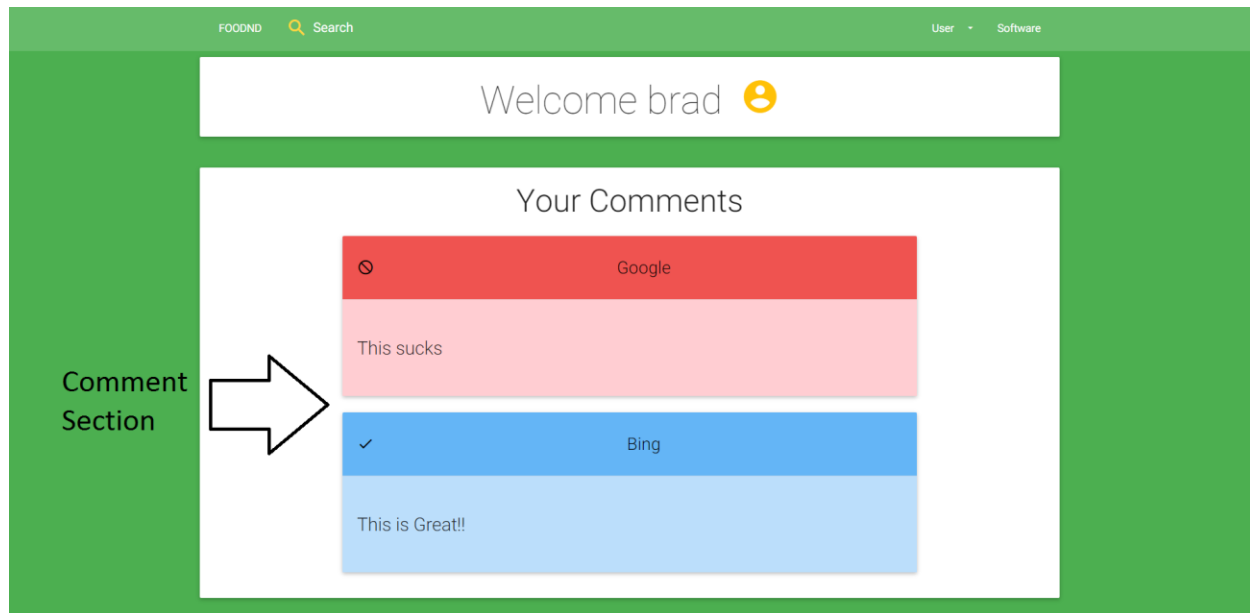

LOGIN:

The Login page allows you to either sign into an account you have already created or create a brand new account of your own. There are two separate forms on the page to fill out, one for each option. After signing in or up, you will be taken directly to your HOME page.

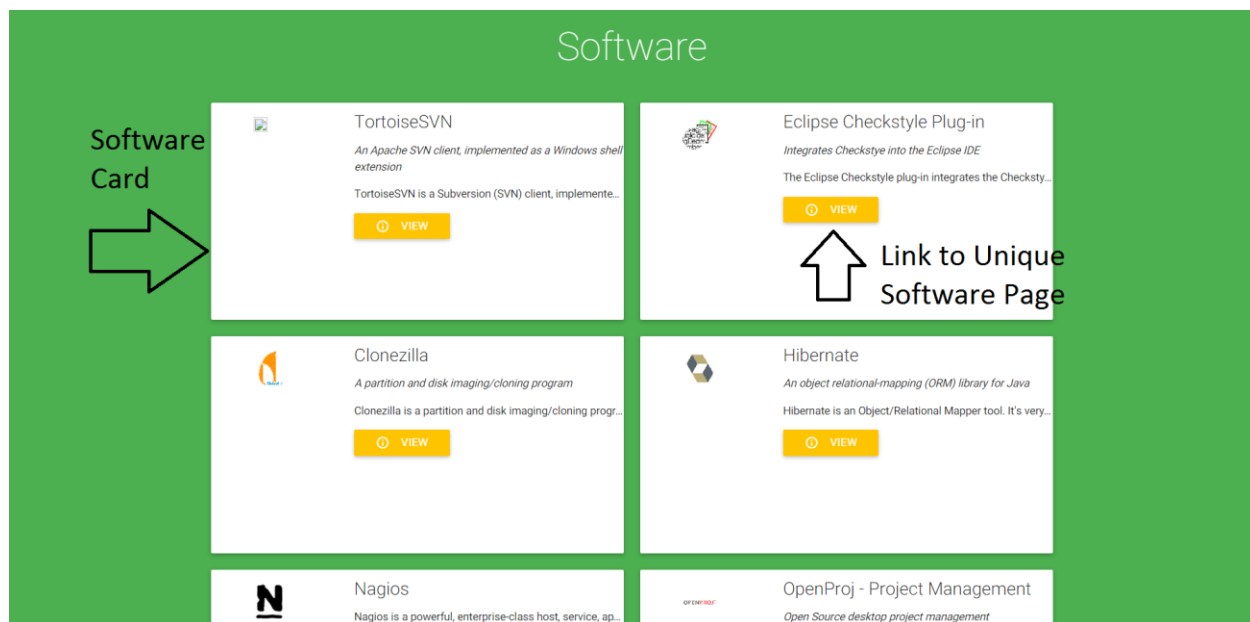

HOME:

The HOME page allows you to see comments you have left on the various software on the website.

SOFTWARE:

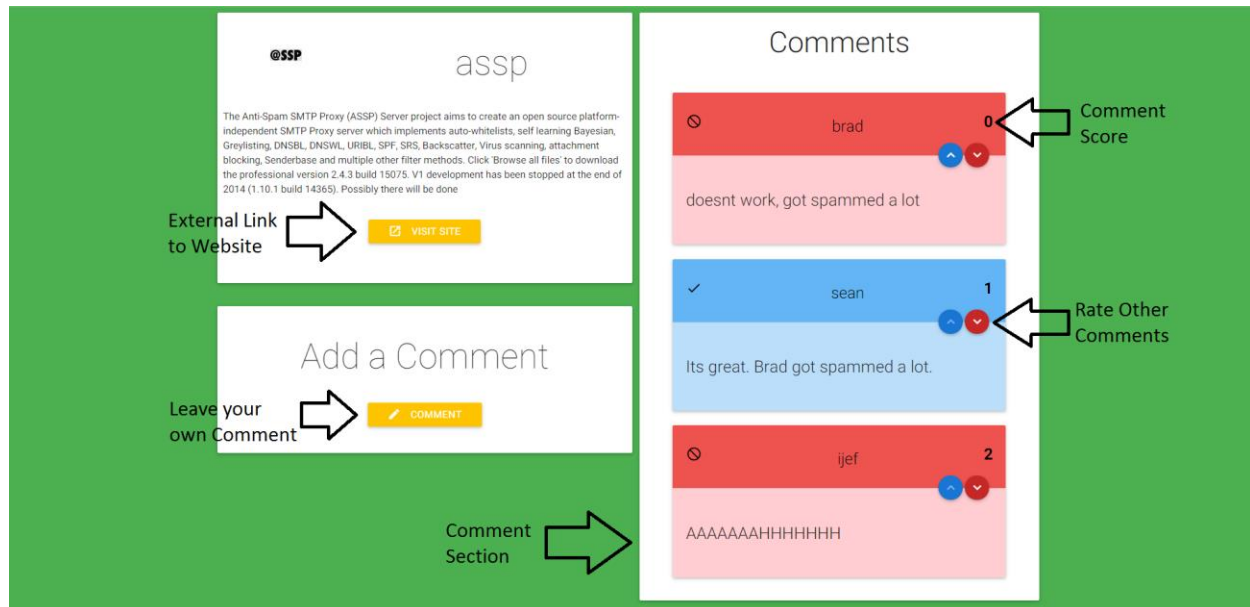

The SOFTWARE page allows you to search through the software on our database and use the VIEW buttons to look at the unique software pages.

UNIQUE SOFTWARE:

Each piece of software has its own page. On this page you can see a description of the software and a list of the comments made about each software. Each comment is color coded based on whether the user liked or did not like the software. Each comment is also able to be rated by other users based

on how good they find the comment. Additionally, you are able to leave a comment of your own on this page and give the software a positive or negative rating.

After pressing the COMMENT button:
